

## Powder Tester (PT2C)

With the OCS Powder Tester (PT2C), powdery materials can be analysed on a vibration plate using a colour matrix camera. The system detects impurities that show a colour deviation from the product. An additional feature of the PT2C is a sorting system (optional) that sorts out the contaminated powder. Further advantages are the data transfer of the real-time results to the production and process control as well as the subsequent evaluation of the sorted-out powder by further analysis systems.

### Testable Raw Materials

- Powdery materials (free-flowing)

### Features

- High-performance 3CMOS colour matrix camera
- Smallest detectable contamination size: 10 µm
- Throughput rate of up to 1200 g/h depending on the material and resolution
- Visualisation of the real-time results
- Sorting system for sorting out the contaminated powder (optional)

### Sales Team

T +49 2302 95622-0  
F +49 2302 95622-33

### Address

OCS Optical Control Systems GmbH  
Wullener Feld 24  
58454 Witten  
Germany

### Technical Details

Camera	3CMOS colour matrix camera
Resolution	10 µm

<b>Lighting</b>	High-power LED with white light spectrum
<b>Communication protocol</b>	MODBUS (RTU, TCP/IP), PROFIBUS, PROFINET, OPC (Server/Client), CSV file, customer-specific
